The key to Sound

The key to Sound

History & Innovation

At the end of 2005, a professional range of high quality loudspeakers was born – LOTUSLINE.

- 2006** LOTUSLINE has applied three proprietary technologies in three series:
- 2007** SIC™ technology in Lotusline SB series
MVC™ technology in Lotusline MA series
SHM™ collinear waveguide technology in Lotusline LA system
- 2009** LOTUSLINE acquired its own compiler software EASE Focus, called LA system.
- 2011** LOTUSLINE applied a new proprietary technology CLS™ (Coaxial line source) technology.
- 2013** LOTUSLINE has licensed EASE Focus 2 and applied a new proprietary technology, SSA™ (Spherical source array) SSA based cabinets are arrayable asymmetrical elements to be used unitary or coupled up to full hemispherical perfectly coherent point source.
- 2016** LOTUSLINE first proposed the concept of spherical waves. This technology was first applied to the SSA series.
- 2021** LOTUSLINE officially authorized the establishment of the Asia-Pacific Operations Center in Guangzhou, China. This operations center works closely with Europe to become a big family.
- 2024** LOTUSLINE first proposed the concept of precise adjustable radiation and adaptive adjustment, to fully prepare for the innovative application of AI in the field of professional acoustics in the future

LOTUSLINE systems are state of the art innovative products and offer the sound designer, sophisticated but easy to use electro acoustic tools, which are the key to sound.

Forget the system and enjoy the sound !

Coaxial Technology

Classical arrangement of two way loudspeakers uses separate transducers positioned on a common front baffle. In the transition frequency region, due to the difference of path length between the listening point and the two separate sources, spatial frequency answer cannot be homogenous. This problem is particularly sensitive for short field listening such as stage monitoring and small venues.

By superposing both of the two sources, coaxial technology eliminates the problem and creates a perfect homogenous acoustic field on all the speaker coverage as well horizontally as vertically.

The advantages of the coaxial approach include: single point source radiation, total wavefront coherency at all frequencies and superimposed LF/HF dispersion characteristics that are free of polar lobbing effects typical of traditional horn and woofer combinations. The net result is natural, studio monitor level sound quality that is ideal for proximity use.

Lotusline MA & MQ series include two different coaxial arrangements.

The first one uses the main driver cone as horn load for the HF driver.

This arrangement offer the largest possible conical coherent coverage and is used in MA8v2, MA10v2, MA12v2 and MA15v2.

The second one uses a separate horn for the HF driver.

This arrangement offers smaller aperture angles and higher lomid efficiency by loading the main cone in its throat region. We call it "active" horn loading.

This arrangement is used in MQ60.

Standard coaxial arrangement

Coaxial active horn arrangement

Line Source Technology

All line arrays are not line sources ! What's the difference ?

A true line source array generate an homogenous acoustic field on all its coverage area, in all its frequency range and is free of interference problems. The net result is the same sound from near field to far field.

The conception of a true line source encounters a lot of technical problems the designer has to solve. The main one is the fusion of all individual sources in only one virtual line source in order to generate on all the frequency range a perfect free of lobbing effects toroidal wavefront. If the solution is evident for low frequencies, this is not the same piece of cake for high ones. The acoustical size of a sound source is close to the wavelength of the generated signal. At 100Hz, the wavelength is 3.4m, so, two speakers distant of 1.2m (half the wavelength) create a perfect coherent source. At 1kHz, the wavelength is only 34cm and these two speakers are no more a coherent source and generate interferences. At 10kHz, the wavelength is 3.4cm and there are no speakers able to realize the performance to be smaller than 1.7cm in the real professional sound reinforcement world.

Many improvements have been made in line source technology, but the physical remain the same.

SHM™ and SIC™, Lotusline proprietary technologies applied in LA series, are fundamental improvements in professional loudspeaker design.

By respecting line source rules and all other acoustic laws, Lotusline LA series are true line source line arrays with a real behaviour close to the mathematical theory.

SHM™ Technology

SHM™ (Single Horn loaded Midrange) improve dramatically midrange bandwidth and efficiency by avoiding multiple components dispersion and using collinear mid and hi frequency horns layout.

First line array uses mid drivers on plane baffle. Small improvements in efficiency have been made by using compression load midrange directly in the front common waveguide, but creating irregularities in frequency response, and dispersion in characteristics due to the multiplication of components. Actually, coaxial midrange equipped with rear standard HF driver is used in common acoustic chamber imposing a long path to high frequency waves. Lotus Line Array uses the shortest possible design by positioning the toroidal HF drivers in front of the midrange driver.

SHM™ technology reduces the total harmonic distortion both in high frequencies by minimizing the length of waveguides and in low mid by increasing the radiating surface of the driver.

CLS™ Technology

CLS™ (Coaxial Line Source) technology is the definitive solution for two way configuration line source symmetrical array systems.

Standard two way line source arrays using only one low frequency driver are asymmetrical cabinets, **CLS™** based Lotusline CL series are symmetrical and optimized minimum front baffle sized.

CLS™ technology offers all advantages of coaxial active horn arrangement applied to line source array systems. It means, minimum front baffle size, perfect symmetry of the baffle and so, perfect symmetry of the coverage.

Lotusline CL series uses **CLS™** technology, increasing the efficiency in low mid region, shaping the wavefront from spherical to ovoid and increasing consequently the maximum crossover frequency in vertical coupling.

SSA™ Technology

SSA™ (Spherical Source Array) technology is Lotusline's answer to an old question: How to build a high SPL, compact and configurable, true point source system?

SSA™ cabinets are mathematically equivalent to a portion of a spherical segment whose acoustic centre at the centre of the mother sphere. In more simple words, **SSA™** cabinets are like pieces of orange, they can be used individually and can also rebuild a complete fruit.

SSA™ cabinets are perfectly arrayable without audible interferences, even in very high frequencies.

Each cabinet can be used unitary for covering small areas or coupled with other **SSA™** cabinets for larger ones.

MVC™ Technology

MVC™ (Multi Vent Convection) technology, increase the power handling capacity of vented loudspeaker by combining acoustical and cooling functions of vents. Multiple curved vents are placed around the main loudspeaker offering a natural air convection flow lowering the temperature of the voice coil in any working position. **MVC™** equipped speakers are much more thermal breakdown proofed than standard ones, and decrease thermal compression by lowering nominal temperature of the moving coil.

The **MVC™** (multi vent convection) technology, allows the Lotusline CL, MQ and MA series to handle nominal full power capacity in any working position.

SIC™ Technology

SIC™ (Single Interactive Chamber) technology, increases bandwidth and efficiency while reducing total volume of vented bass loudspeaker by combining rear and front load in the same volume. Because rear and front load do not work in the same frequency region, it is possible, with a special calculation layout, to fuse both functions in only one. In practice, **SIC™** technology, by using this new physical approach, virtually suppresses one of the two volumes and dramatically reduce the total size of vent loaded subwoofer.

Further advantage of **SIC™** technology is the better cooling of the loudspeakers due to the exceptionally large size of the vent aperture.

Lotusline Technologies

SIC™ technology used in SB Series

- Best versus frequency-extension to size ratio
- Hi efficiency
- Better cooling

SSA™, MVC™ technologies used in SSA Series

- Spherical source array system
- Point source arrangement
- Better cooling, lo thermal compression in any working position

MVC™ and Coaxial technologies used in MQ and MA Series

- Point source, regular spatial response, perfect acoustic field
- Better cooling, lo thermal compression in any working position

SHM™ and line source technologies used in LA Series

- True line source system
- Low distortion at hi SPL
- Perfectly coherent arrays controlling vertical opening

CLS™, MVC™ and Coaxial technologies used in CL Series

- True line source system
- Point source, regular spatial response, perfect acoustic field
- Better cooling, lo thermal compression in any working position

Line Source system

LA series

The key to Sound

LA 10_{v2} & LA 20_{v2}

Lotusline LA series are based on the latest electro acoustics developments and include SHM™ and SIC™ proprietary technologies.

SHM™ (Single Horn loaded Midrange) improve dramatically midrange bandwidth and efficiency by avoiding multiple components dispersion and using collinear mid and hi frequency horns layout.

First line array uses mid drivers on plane baffle. Small improvements in efficiency have been made by using compression load midrange directly in the front common waveguide, but creating irregularities in frequency response, and dispersion in characteristics due to the multiplication of components. Actually, coaxial midrange equipped with rear standard HF driver is used in common acoustic chamber imposing a long path to high frequency waves. Lotusline Line Array uses the shortest possible design by positioning the toroidal HF drivers in front of the midrange driver.

SHM™ technology reduces the total harmonic distortion both in high frequencies by minimizing the length of waveguides and in low mid by increasing the radiating surface of the driver.

Lotusline Line Array are high efficient systems, thanks to the entirely horn loaded design, and the use of the best modern European custom build transducers. Combined with the true line source design of Lotusline Line Array, high sound pressure levels can be obtained in far field with the best tonal balance on the whole system coverage.

The Lotusline LA series three points hanging compression mechanism also reduces needed floor surface and saves installation time due to the straight vertical array configuration used during setup. The final curvature is quickly and easily obtained when the system is on its working position. By releasing the compression on the rear point, Lotusline Line Array returns to the straight vertical position in a few seconds and is ready for a fast disassembly.

Due to its exceptional sound quality, its power capacity, and its fast and easy rigging, Lotusline Line Array series are intended for daily use in touring companies, as well as for permanent installation in theatres, congress centres or arenas.

The key to Sound

LA 10v2 Line source system

- Three way line source system
- Two 10 inch Bass Drivers
- One 8 inch Midrange driver
- Two compression neodymium planar wave drivers
- SHM™ Collinear arrangement
- 60° horizontal coverage and 0° to 10° vertical coverage
- Dispersion controlled from 250Hz
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

Lotusline LA10v2 are line array modules designed for variable curvature vertical tangent array, including SIC™ technology and SHM™ proprietary technology, able to build long throw line sources system .

The LA10v2 is an active three-way loudspeaker system. The low section comprises two 10 inch drivers loaded by a 4th order SIC™ bass reflex enclosure. The mid section comprises one 8 inch driver, the high section includes two 1.75" (44.4mm coil) neodymium high frequency compression drivers mounted on the SHM™ waveguide which provides a 60° horizontal coverage and 0° to 10° vertical coverage,

The 60° horizontal coverage and 0° to 10° vertical coverage offer the sound designer the best versatility for any precisely designed installation. Lotusline LA10v2 are completely compatible with Lotusline subwoofers series and can be stacked directly on anyone.

Due to its exceptional sound quality, its power capacity, and its fast and easy rigging, Lotusline Line Array series are intended for daily use in touring companies, as well as for permanent installation in theatres, congress centres or arenas.

Specifications

FEATURES	Low Section	Mid Section	High Section
Frequency range with processor (±3dB)	65 Hz to 400 Hz	200 Hz to 1500 Hz	1200 Hz to 19 kHz
Sensitivity@1W/1m, f>80Hz ¹	105 dB SPL	106 dB SPL	113 dB SPL
Maximum continuous level at 1m ²	132 dB SPL	129 dB SPL	135 dB SPL
Peak level at 1m, f>65Hz	138 dB SPL	135 dB SPL	141 dB SPL
Nominal impedance	2 x 16 Ohms	16 Ohms	32 Ohms
Nominal horizontal coverage@-6dB ³	60°		
Unit nominal vertical coverage@-6dB ³	0° to 10° (0.5°, 1°, 1.7°, 2.6°, 4.2°, 6.7°, 8.5°, 10°, inter-enclosure angles)		
COMPONENTS			
Transducers	2 x 10" weatherproof loudspeakers	1 x 8" weatherproof loudspeakers	2 x toroidal compression drivers
Coil diameter	77 mm	45 mm	44.4 mm
Type of load	SIC™ Bass reflex	SHM™ horn	SHM™ horn
Power (AES/ Peak)	500 W / 2000 W	300 W / 1200 W	160 W / 900 W
CONSTRUCTION & CHARACTERISTICS			
Cabinet	18mm birch plywood with internal braces		
Crossover	Factory presets		
Connectors	50cm link cable, 1 x Speakon NL8MP		
Handles	4 wood integrated handles		
Rigging	Proprietary 3 points compression system		
Dimensions (H x W x D)	331 x 1000 x 738 mm		
Net unit weight	58 kg 128 lbs		
Gross weight, packed	62 kg 137 lbs		

1. Sensitivity is the average SPL measured over the components rated bandwidth. LA series sensitivity are given for a minimum line of four units.
 2. Power rating displays the long term AES power handling capacity using pink noise with a 6 dB crest factor over the components rated bandwidth
 3. Directivity is averaged over the frequency range.
 4. The SPEAKON connectors are wired as follow : LF1: hot pin 1+, cold pin 1-, LF2: hot pin 2+, cold pin 2-, MF: hot pin 3+, cold pin 3-, HF: hot pin 4+, cold pin 4-.

LA Series

The key to Sound

LA 20v2 Line source system

- Three way line source system
- Two 10 inch bass drivers
- One 8 inch midrange driver
- Two neodymium compression planar wave drivers
- SHM™ collinear arrangement
- 100° horizontal coverage and 10° to 20° vertical coverage
- Dispersion controlled from 250Hz
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

Lotusline LA20v2 are line array modules designed for variable curvature vertical tangent array as well as horizontal constant curvature horizontal tangent array, including SIC™ technology and SHM™ proprietary technology.

The LA20v2 is an active three-way loudspeaker system. The low section comprises two 10 inch driver loaded by a 4th order SIC™ bass reflex enclosure, The mid section comprises one 8 inch driver, the high section includes two 1.75"(44.4mm) coil, neodymium high compression drivers mounted on the SHM™ waveguide which provides a 100° horizontal coverage and 10° to 20° vertical coverage,

Designed to build medium throw line sources, the 100° horizontal coverage and 10° to 20° vertical coverage of LA20v2 perfectly complement LA10v2 line sources for downfill.

Composite arrangements of LA10v2 and LA20v2 are the best solution to cover any large audience area homogeneously.

Lotusline LA20v2 are completely compatible with Lotusline subwoofers series and can be stacked directly on anyone.

CL Series

The key to Sound

CL 40T Coaxial line source system

- Two way coaxial line source system
- One 15 inch coaxial driver
- One 1.4 inch throat neodymium compression driver
- CLS™ collinear arrangement
- Usable unitary or arrayed
- 40° horizontal coverage and 90° vertical coverage
- Vertical or horizontal arrangement
- Integrated passive crossover optimized for security applications
- OEM factory presets for approved digital processors

The Lotusline CL40T loudspeaker cabinets provide a versatile system designed for high quality coupled or distributed sound reinforcement in high performance fixed installation.

The CL40T is a compact but high power system including MVC™ technology and the CLS™ Lotusline proprietary technology.

The CL40T is a two-way loudspeaker system with integrated crossover and 100V transformer. The low-mid section comprises a 15 inch coaxial driver loaded by a 4th order MVC™ bass reflex enclosure. The high section includes a 1.4 inch throat (3" voice coil) neodymium high frequency compression driver mounted on CLS™ waveguide that provides an 40° horizontal coverage and 90° vertical coverage.

The Lotusline CL40T crossovers are build with air core inductors, MKP capacitors and wirewound resistors.

Lotusline CL40T is a ideal for fixed installation. Can be used one by one in distributed configuration as well as coupled up to four depending on the coverage angle needed. The integrated rigging system allows vertical and horizontal coupling.

A minimum quantity of cabinets is used to cover large areas in mid throw installations like; With IP54 classification, 700V insulation, 100V transformer, two power handling, the CL40T is particularly suitable for deported security installation in large open public spaces.

2. Power rating displays the long term AES power handling capacity using pink noise with a 6 dB crest factor over the components rated bandwidth

3. Directivity is averaged over the frequency range.

SS 15 Spherical Source Array element

- Two way spherical source element
- One 15 inch low frequency driver
- One 3 inch coil compression driver
- Point source arrangement
- SSA™ waveguide
- 45° horizontal coverage
- 60°(+15° -45°) vertical coverage
- Designed for high performance fixed installation
- OEM factory presets for approved digital processors

Lotusline **SS15** loudspeaker system are based on the latest electro acoustics developments and include the new **SSA™** proprietary technology.

The **SS15** is an active two-way loudspeaker cabinet. The low-mid section comprises a 15 inch high power driver loaded by a **MVC™** bass reflex enclosure. The high section includes a 1.4 inch throat (3" voice coil) neodymium high frequency compression driver mounted on **SSA™** waveguide that provides an 45° horizontal coverage and 60° (+15° up, -45° down) vertical coverage.

The loudspeaker enclosure constructed of 18 mm birch plywood with internal braces remains free of vibration at extreme sound pressure levels. The enclosure have 2 aluminum integrated handles on the sides and include 8 x M6 integrated nuts.

SS15 cabinets are great tools offering the sound designer a wide range of new possibilities as well for shadow zone which cannot be covered by the main system, as for building FOH systems in theatres, clubs, auditoriums, churches and all places where long throw is not a mandatory parameter but, a constant tonal balance with distance is.

SS15 cabinets eliminate the need of extra downfill cabinets and can cover places with front stalls and balcony.

SS15 cabinets are designed for constant curvature vertical tangent array as well as horizontal constant curvature horizontal tangent array. Like other Lotusline products, **SS15** cabinets are equipped with all necessary points for an easy and secure rigging using proprietary accessories.

Point Source system

MA series

The key to Sound

MA 15_{V2} / MA 12_{V2} / MA 10_{V2} / MA 8_{V2}

The Lotusline MA series loudspeaker enclosures provide a versatile system that is designed for high quality distributed sound reinforcement or high performance monitoring. Using true point source coaxial technology, the Lotusline MA series features advanced components in a flexible, multipurpose format that is suitable for either touring or fixed installation.

The MA series are passive two-way loudspeaker. The low/mid section comprises a bass driver loaded in a 4th order MVC™ enclosure, The hi section includes a High Frequency compression driver assembled in a coaxial configuration along with the full low section loudspeaker providing a conical opening.

Further advantages of the coaxial approach include: single point source radiation, total wavefront coherency at all frequencies and superimposed LF/HF dispersion characteristics that are free of polar lobbing effects typical of traditional horn and woofer combinations. The net result is natural, studio monitor level sound quality that is ideal for proximity use.

The MA series provides a very coherent acoustic field with 90°-120° conical coverage.

The MVC™(Multi Vent Convection) technology, allows the Lotusline MA series to handle nominal full power capacity in any working position.

The enclosure comprises two angles side, 45° and 60° for stage monitor application and include two 35mm built in stand supports as well as four wood integrated handles and 5 cargo standard rigging points.

The Lotusline MA series crossovers are build with air core inductors, MKP capacitors and wirewound resistors.

The Lotusline MA series apply full power handling with low thermal compression.

MQ Series

The key to Sound

MQ 60 Point source system

- Coaxial technology
- Passive Two way system
- True point source
- Conical 60° waveguide
- Increasing controlled directivity
- MVC™ Bass-reflex cooling
- Full power handling with low thermal compression
- Suitable for medium-power FOH and side fill applications
- Designed for high performance fixed installation and touring or stage monitoring
- OEM factory presets for approved digital processors

The Lotusline MQ60 loudspeaker cabinets provide a versatile system designed for high quality distributed sound reinforcement in high performance fixed installation or stage monitoring. Using true point source coaxial technology and increasing directivity design, the MQ60 offers a full coverage free of lobbing effects inside and outside the coverage angles.

The coaxial technology combined with increasing controlled directivity design used in the MQ60 is the best solution to recreate true point source with natural sounding behaviour. The MQ60 is the perfect answer to obtain high intelligibility and clarity in semi reverberant acoustic environments.

The MQ60 is a two-way loudspeaker system with integrated crossover. The low-mid section comprises a 15 inch bass driver loaded by a 4th order MVC™ bass reflex enclosure. The high section includes a 1.4 inch throat (3" voice coil) neodymium high frequency compression driver assembled in a coaxial configuration together with the low section loudspeaker providing a conical opening.

The MQ60 provides a coherent acoustic field with 60° conical average coverage.

Two MQ60 can be used coupled to increase the SPL and coverage while minimizing destructives interferences.

The MQ60 is meant as a main F.O.H and distributed sound system in big rooms like convention centres, theatres, clubs and multipurpose venues or corporate events.

Subwoofer Source system

SB series

The key to Sound

SB 115 / SB 215S / SB 218S / SB 218PS

Lotusline SB series are based on the latest electro acoustics developments and include **SIC™** proprietary technology.

SIC™ technology, Single Interactive Chamber, increases bandwidth and efficiency while reducing total volume of vented bass loudspeaker by combining rear and front load in the same volume. Because rear and front load do not work in the same frequency region, it is possible, with a special calculation layout, to fuse both functions in only one. In practice, **SIC™** technology, by using this new physical approach, virtually suppresses one of the two volumes and dramatically reduce the total size of vent loaded subwoofer. Further advantage of **SIC™** technology is the better cooling of the loudspeakers due to the exceptionally large size of the vent aperture.

The loudspeaker enclosure constructed of 18 mm birch plywood with internal braces remains free of vibration at extreme sound pressure levels.

The enclosure have wood integrated handles on the sides and can be fitted with 4 optional castor plates on the back.

SB 115 Subwoofer system

- High power subwoofer system
- High efficiency
- SIC™ Technology
- Full power handling with low thermal compression
- Suitable for medium-power FOH and another applications
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

Lotusline SB115 is a subwoofer offering low frequencies reinforcement for medium to high power systems. It uses one 15 inch transducer loaded by Single Interactive Chamber.

This technology offers the advantages of using a small volume for the load of the speaker, high efficiency in the usable bandwidth and perfect control of the excursion of the diaphragm.

The SB115 subwoofer with Single Interactive Chambers have been developed to offer the best versus frequency-extension to size ratio.

The SB115 provides a very dynamic and punchy sound reproduction for the sound effects that are commonly found in electronic music where the whole dynamic capacity of systems is used. This subwoofer offers full flexibility for low frequency reinforcement of the Lotusline speakers and the Line Array systems.

The SB115 is also ideal for Stadiums, arenas, and concert halls, Medium to large theatres, Cinema and nightclubs, multi-purpose venues or corporate events.

- Full power handling with low thermal compression
- Suitable for medium-power FOH and another applications
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

Lotusline SB218PS is the companion subwoofer for LA, CL, MQ and MA system features, direct radiating 18-inch transducers loaded in an optimally-sized and tuned vented enclosure. With power handling capacity of 2400 W(AES) long term (6000W/peak) and response to 35 Hz.

The SB218PS is ideal for applications requiring maximum low frequency extension and impact. The SB218PS provides unparalleled low end punch and bass articulation combined with high power handling and efficiency.

Due to its compact design and critically damped tuning, multiple SB218PS enclosures couple effectively while providing the bass definition and musicality that only a direct radiating subwoofer can provide.

The SB218PS provides a very dynamic and punchy sound reproduction for the sound effects that are commonly found in electronic music where the whole dynamic capacity of systems is used. This subwoofer offers full flexibility for low frequency reinforcement of the Lotusline speakers and the Line Array systems.

The SB218PS is also ideal for distributed sound reinforcement and can be used in theatres, clubs, multi-purpose venues or corporate events.

SW series

The key to Sound

SW 15 / SW 25 / SW 18 / SW 28

The Lotusline SW series are subwoofer designed with the latest state of the art simulations tools in terms of acoustic quality, mechanical strength and optimized cooling.

The loudspeaker enclosure constructed of 18 mm birch plywood with internal braces remains free of vibration at extreme sound pressure levels.

Due to its compact design and critically damped tuning, multiple SW series enclosures couple effectively while providing the bass definition and musicality that only a direct radiating subwoofer can provide.

The SW series are also ideal for distributed sound reinforcement and can be used in theatres, clubs, multi-purpose venues or corporate events.

SW 15 Subwoofer system

- Compact high power subwoofer
- Arrayable for cardioid design
- CL16 companion subwoofer
- Direct radiating, optimized bass reflex design
- Full power handling with low thermal compression
- Suitable for medium-power FOH
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

The Lotusline SW15 is a subwoofer designed with the latest state of the art simulations tools in terms of acoustic quality, mechanical strength and optimized cooling. The SW15 incorporates one high excursion and low distortion 15-inch driver installed in direct radiation enclosure and loaded by a critically damped bass reflex incorporating multiple vents (MVC technology) for a better cooling.

The 15-inch transducers have a 3 inch (76 mm) copper sandwich voice coil on black Kapton former for low power compression and double treated cone for water protection. Triple demodulating rings combined with 8mm excursion capability, die cast aluminium basket, massive vented magnet structure offer the best performances even in very low frequencies.

Its power handling capacity of 500 W (AES) long term and 2000 W (Peak) all other the usable frequency bandwidth from 43 to 500 Hz (± 3 dB) offers a permanent 123 dB SPL and 129 dB SPL peak.

The enclosure constructed of 18 mm birch plywood with internal braces remains free of vibration at extreme sound pressure levels. The enclosure have 2 aluminum integrated handles on the sides and can be fitted with 4 optional rigging parts on the sides.

The SW15 is also ideal for distributed sound reinforcement and can be used in theaters, clubs, multi-purpose venues or corporate events.

SW 25 Subwoofer system

- Very high power subwoofer system
- High efficiency
- Direct radiating, optimized bass reflex design
- Full power handling with low thermal compression
- Suitable for large and medium-power FOH and another applications
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

The Lotusline SW25 is a subwoofer designed with the latest state of the art simulations tools in terms of acoustic quality, mechanical strength and optimized cooling. The SW25 incorporates two high excursion and low distortion 15-inch driver installed in direct radiation enclosure and loaded by a critically damped bass reflex incorporating multiple vents (MVC™ technology) for a better cooling.

The 15-inch transducers have a 4.0 inch (100 mm) copper sandwich voice coil on black Kapton former for low power compression and double treated cone for water protection. Triple demodulating rings combined with 8 mm excursion capability, die cast aluminium basket, massive vented magnet structure offer the best performances even in very low frequencies.

Its exceptional power handling capacity of 2000W(AES) long term and 5000W(Peak) all other the usable frequency bandwidth from 35 to 200 Hz (± 3 dB) offers a permanent 138 dB SPL and 142 dB SPL peak.

The enclosure constructed of 18 mm birch plywood with internal braces remains free of vibration at extreme sound pressure levels.

The enclosure have 4 aluminium integrated handles on the sides and include two 35mm built in stand supports on the top.

The SW25 is also ideal for distributed sound reinforcement and can be used in theatres, clubs, multi-purpose venues or corporate events.

SW 18 Subwoofer system

- High power subwoofer system
- High efficiency
- Direct radiating, optimized bass reflex design
- Full power handling with low thermal compression
- Suitable for large and medium-power FOH and another applications
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

The Lotusline SW18 is a subwoofer designed with the latest state of the art simulations tools in terms of acoustic quality, mechanical strength and optimized cooling. The SW18 incorporates one high excursion and low distortion 18-inch driver installed in direct radiation enclosure and loaded by a critically damped bass reflex incorporating multiple vents (MVC™ technology) for a better cooling.

The 18-inch transducer have a 4.0 inch (100mm) copper voice coil which has 1200W continuous program power capacity, together with FEA optimized and double silicone spider with optimized. The 18-inch transducer is neodymium magnet assembly, it has a smart ventilated voice coil gap for reduced power compression.

Its exceptional power handling capacity of 1200W(RMS) long term and 2400W(Peak) all other the usable frequency bandwidth from 31 to 200 Hz (± 3 dB) offers a permanent 131 dB SPL and 135 dB SPL peak. al braces remains free of vibration at extreme sound pressure levels.

The enclosure have 4 aluminium integrated handles on the sides and include one 35mm built in stand supports on the top.

The SW18 is also ideal for distributed sound reinforcement and can be used in theatres, clubs, multi-purpose venues or corporate events.

SW 28 Subwoofer system

- Very high power subwoofer system
- High efficiency
- Direct radiating, optimized bass reflex design
- Full power handling with low thermal compression
- Suitable for large and medium-power FOH and another applications
- Designed for high performance fixed installation and touring
- OEM factory presets for approved digital processors

The Lotusline SW28 is a subwoofer designed with the latest state of the art simulations tools in terms of acoustic quality, mechanical strength and optimized cooling. The SW28 incorporates two high excursion and low distortion 18-inch driver installed in direct radiation enclosure and loaded by a critically damped bass reflex incorporating multiple vents (MVC™ technology) for a better cooling.

Each 18-inch transducer have a 4.0 inch (100mm) copper voice coil which has 1200W continuous program power capacity, together with FEA optimized and double silicone spider with optimized. The 18-inch transducer is neodymium magnet assembly, it has a smart ventilated voice coil gap for reduced power compression.

Its exceptional power handling capacity of 2400W(RMS) long term and 5000W(Peak) all other the usable frequency bandwidth from 31 to 200 Hz (± 3 dB) offers a permanent 141 dB SPL and 145 dB SPL peak.

The enclosure constructed of 18 mm birch plywood with internal braces remains free of vibration at extreme sound pressure levels.

The enclosure have 6 aluminium integrated handles on the sides and can be fitted with 4 optional castor plates on the back.

The SW28 is also ideal for distributed sound reinforcement and can be used in theatres, clubs, multi-purpose venues or corporate events.

LAM Series

The key to Sound

LAM 8 / 12 Power Amplifier

- Integrated DSP management system on board
- Under Armonia Plus system manager network controlled
- 2048 taps FIR filters
- With two 4-channel models available namely 8 and 12
- Can deliver up to 3000W per channel
- Designed for high performance fixed installation and touring

LAM is an optimized amplifier platform developed for wishing to offer a complete speaker package to all systems of Lotusline loudspeaker, all Lotusline loudspeakers systems are recommended to apply under the preset data of DSP on board. LAM is Acronym for Lotusline All Markets, this CB scheme-certified, EMC Tested amplifier platform allows efficient global market access and simple applications for all Lotusline users.

Proprietary speaker presets can be created and shared through the widely adopted ArmoniaPlus software. Based on Lotusline amplification technology, LAM includes comprehensive signal processing, 2048 taps FIR filters, Damping Factor Control, Dynamic EQ, analog, AES3, Dante/AES67 inputs and outputs, and a bright 4.3" IPS display with capacitive touch. The patented PFC-equipped power supply can operate anywhere in the world, and sports 750J of energy storage to provide a consistent performance. With two 4-channel models available, namely the 8 and the 12, the LAM offers ample power and voltage and can deliver up to 3000 W per channel. The amplifier can be controlled remotely with ArmoniaPlus or by third-party software, and locally through the display interface. The available functions include preset recall, gain, delay, and muting, satisfying all most common end user's requirements.
